

Real China People around the world pay attention to the new coronavirus

Since January 29, 2020, China has infected more than 60,000 people, with an average treatment cost of 50,000 US dollars per patient, reducing the virus mortality rate to 0.2%. China lost hundreds of billions of dollars, stopped most factories and avoided the spread of the virus.

This result caused Japan and South Korea to misunderstand that they thought the virus was the same as the flu.

In addition, according to research by Chinese scientists, the birthplace of the new coronavirus is not necessarily Wuhan, China, and there are other versions in other countries.

Therefore, please do not go out, do not go to crowded places, wear a mask when going out.
